

Embed a Video into a Weebly Webpage

Note: To complete this activity, you will need to have access to an embed code from the target source hosting your file (ex. embed code created in Sway).

1. Log into Weebly and navigate to the page you would like to add your video.
2. Click on the **Build** tab.
3. Locate the **Embed Code** tile in the left pane and drag it to the location on your webpage you would like your video to appear.

4. Click in the new box that appears. A Custom HTML dialog box will open. Click the **Edit Custom HTML** button and paste the embed code copied from the resource hosting your video (ex. embed code created in Sway) into the box provided.

5. Click an area outside the dialog box, then click the **Publish button** in the top right of the Weebly editor. Congratulations! Your video will now play within your Weebly webpage!
